Case study

I decided to pick which project I thought which was strongest and write about it

I decided to pick "My Blog", which I developed over the in WEB 2630, I decided to choose this project, because I thought it looked the neatness, while it lack color it demonstrates some my basic CSS skills. However, there are other project which demonstrate better use of color. There are plenty more project which use things like SCSS, I think It would be good to compare this project to another project.
